

NOT GOVERNMENT POLICY

# Regional Innovation District Study

Key insights from the stakeholder survey

# Why we need digital innovation more than ever

## 1 The pace of technological progress is accelerating

Algorithmic capabilities, computing capacity and data will enable 'beyond-human' competencies and drive profound changes impacting industries and business models as well as life, society and the environment.

## 3 Skills deficits in critical industries

The Loddon Campaspe region currently enjoys low levels of unemployment. This is against a backdrop of global skills shortages in critical areas such as:

Computer /  
Data Science

Management /  
Administration

Sales / Business  
Development

User Interface / User  
Experience Design

## 2 Focus on economic complexity and innovation

Economic complexity is a measure of the productive capabilities of large economic systems. It correlates with innovative output; the more complex the economy, the greater potential benefit from innovation. There is a growing imperative for countries such as Australia to increase economic complexity by diversifying the products and services that are produced domestically.

## 4 Net Zero: creating risk and opportunity

The transition to Net Zero in Australia could generate \$2.1 trillion in new economic activity by 2050 and create 672,000 new jobs across the economy.<sup>2</sup> A large share of these benefits will come the development and application of new technologies. The Australian Government's Net Zero plan shows current technologies will deliver only 85% of reductions needed to achieve Net Zero by 2050. Breakthrough technologies are needed to deliver the 15% balance.

1. Oxford Economics. 'The A.I. Paradox: How Robots Will Make Work More Human.' December 2017.

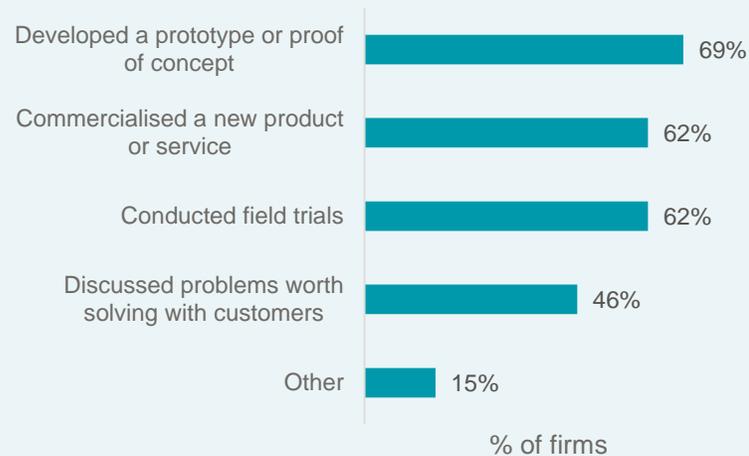

2. Accenture. 2021. "Mission Zero: Australia will achieve \$2.1 trillion future with 672,000 jobs." Daily Telegraph. <https://www.news.com.au/national/australias21-trillion-future-with-672000-jobs-and-net-zero-emissions/news-story/c1c943fc13ce526be2533d896f6ff9e8>

# Firms are already innovating

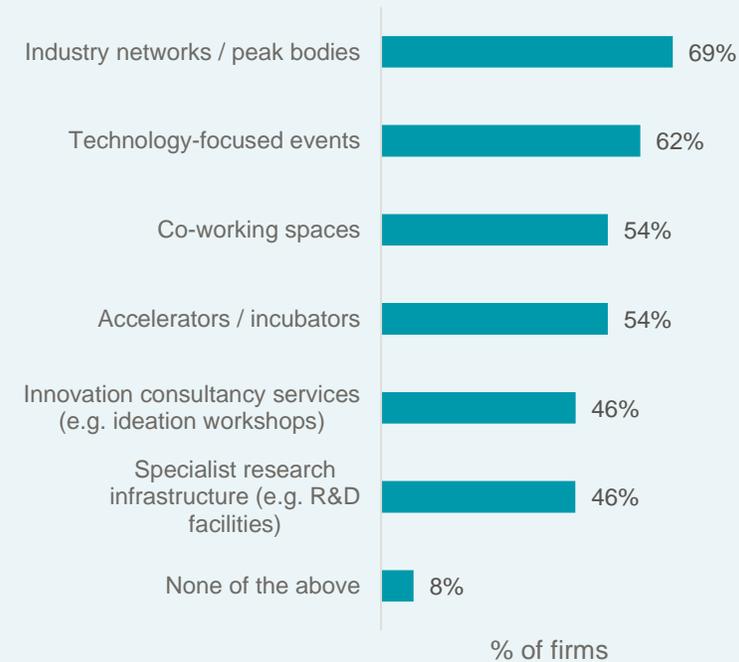

There is already momentum around digital innovation

And firms want to collaborate

## 1 Undertaken innovation activities in past 2 years?

## 2 Accessed innovation services, networks and events?

## 3 Plan to innovate with others in the innovation ecosystem?

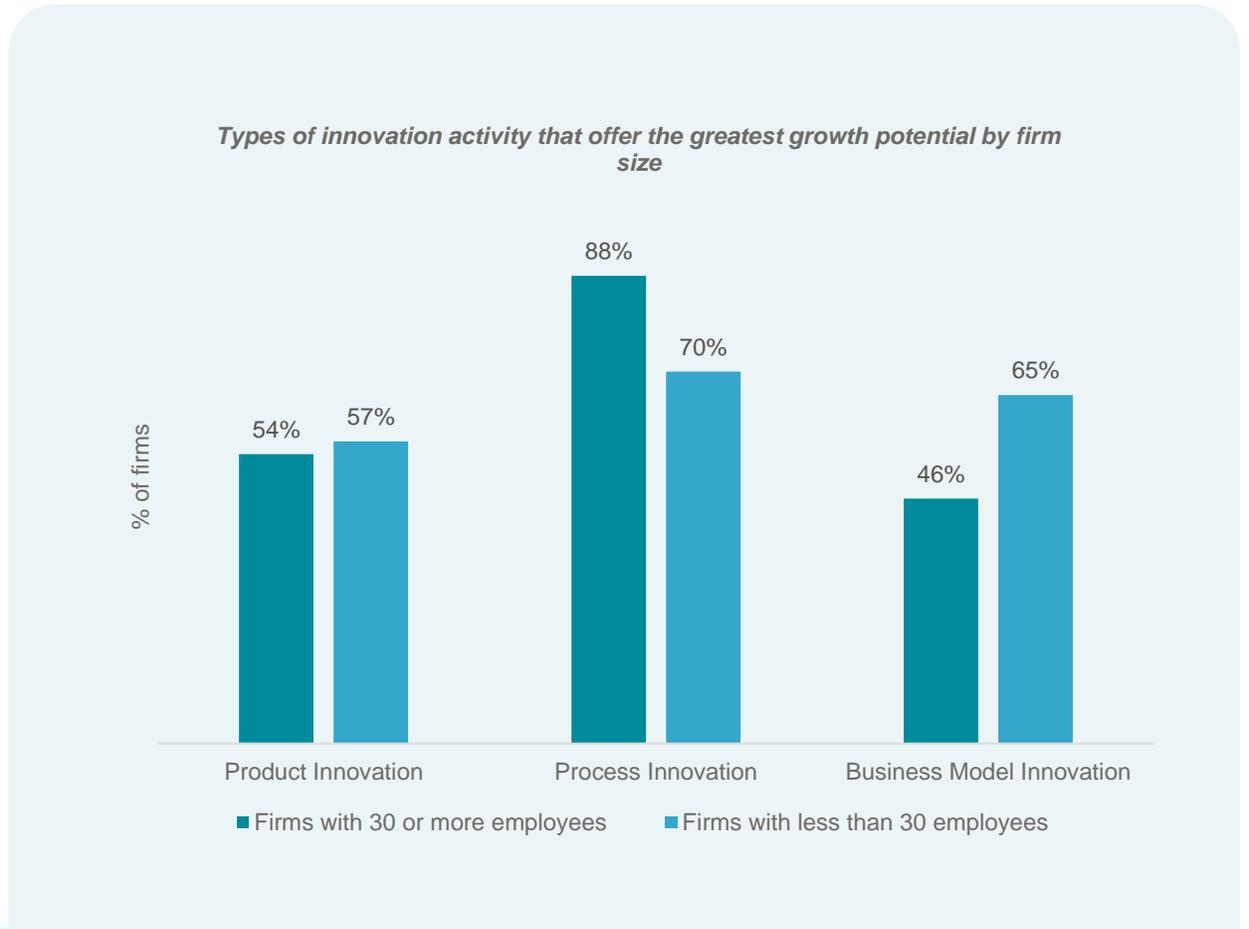

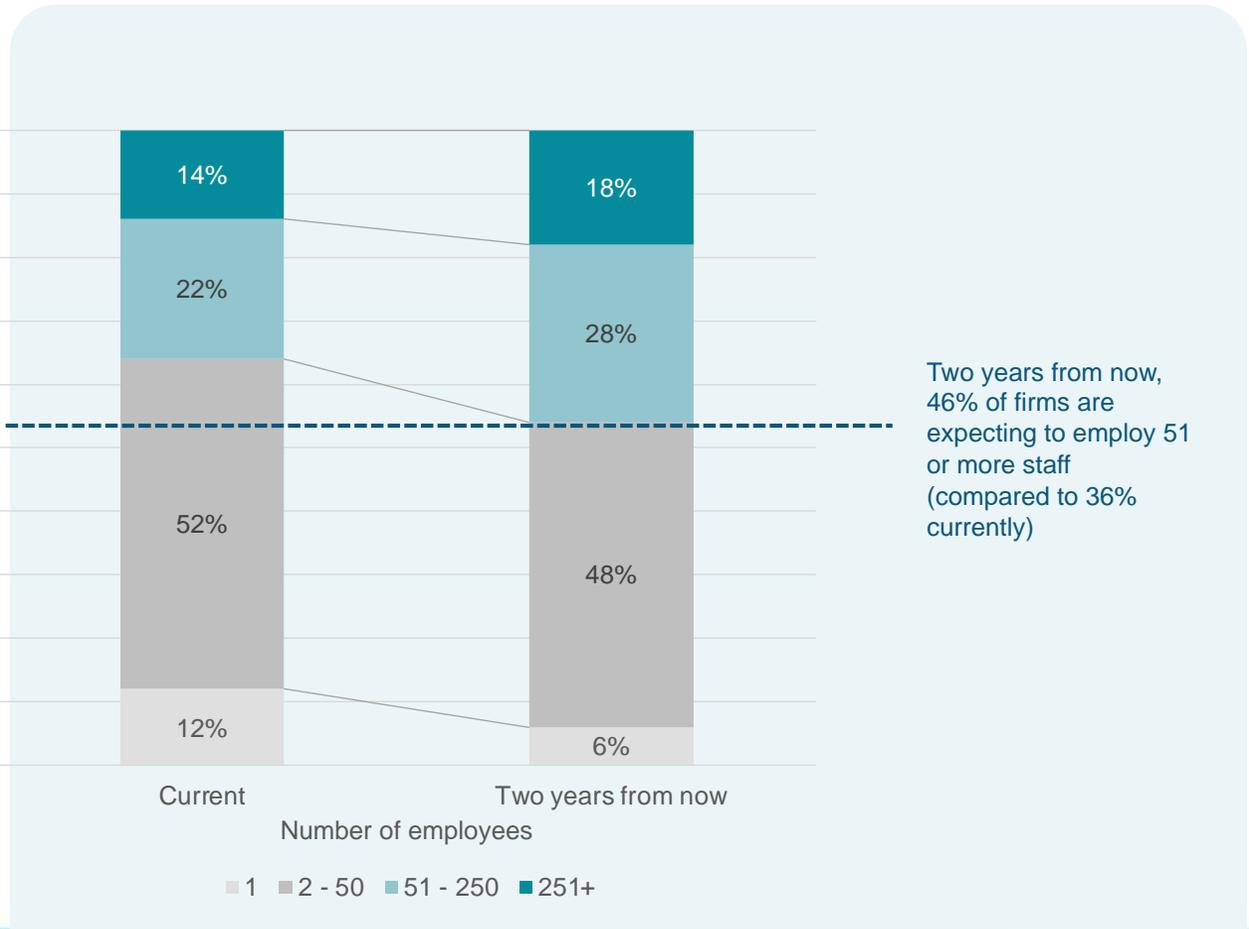

# Innovation will be critical to firms' ability to grow

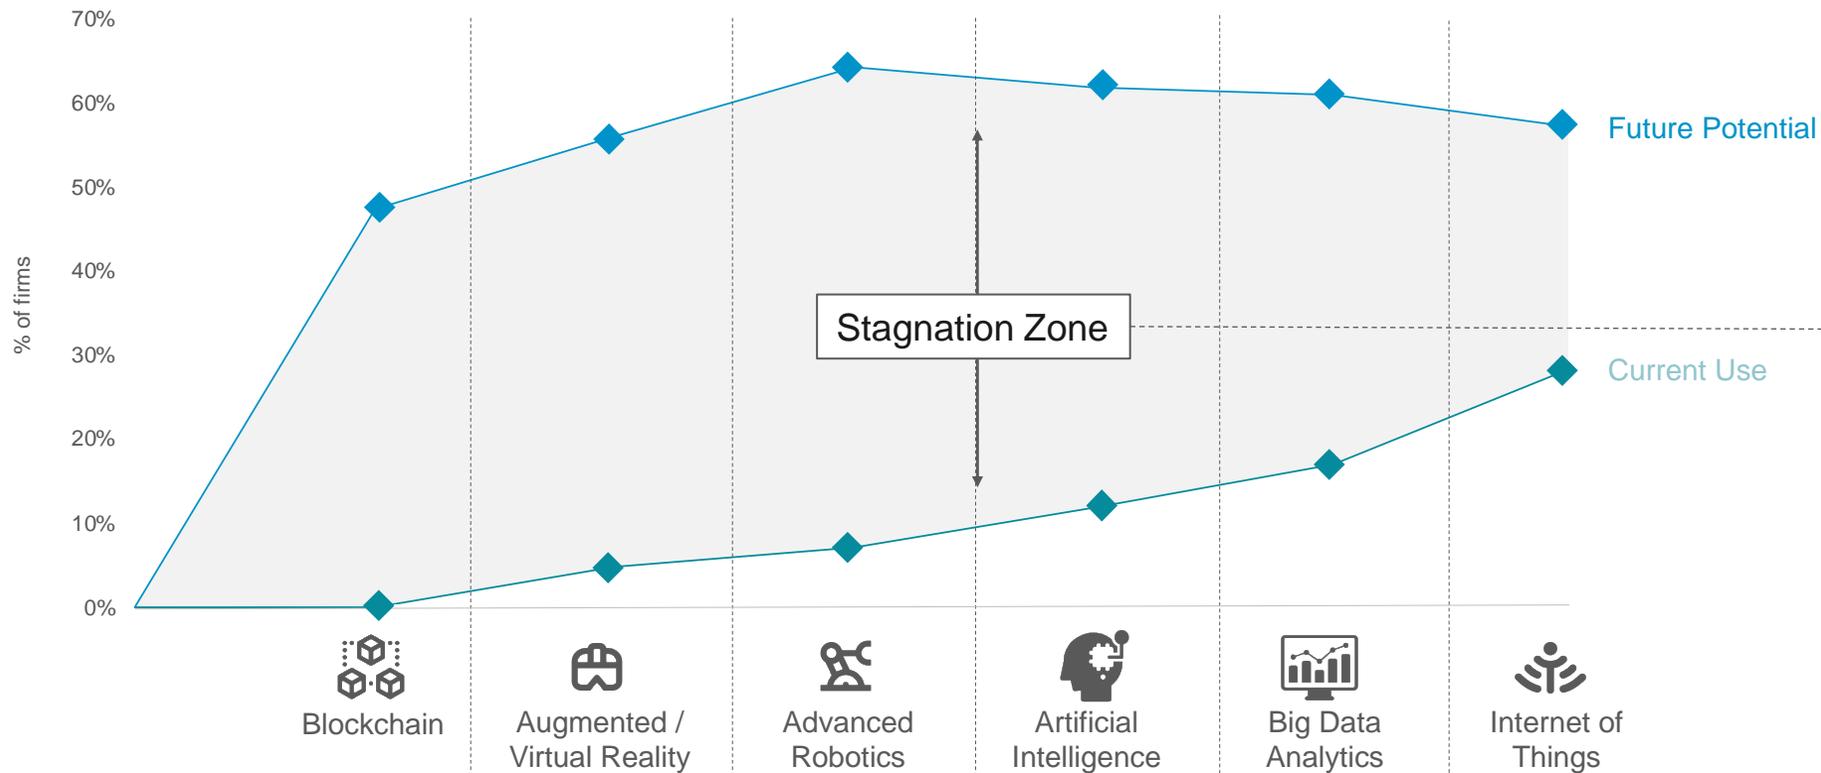

Firms are bullish about future growth...

...And believe innovation is critical

# The stagnation zone

There is a gap between what technologies firms are currently using, and the ones they believe they need to be using to grow in the future. Helping firms adopt technologies earlier is a major opportunity.

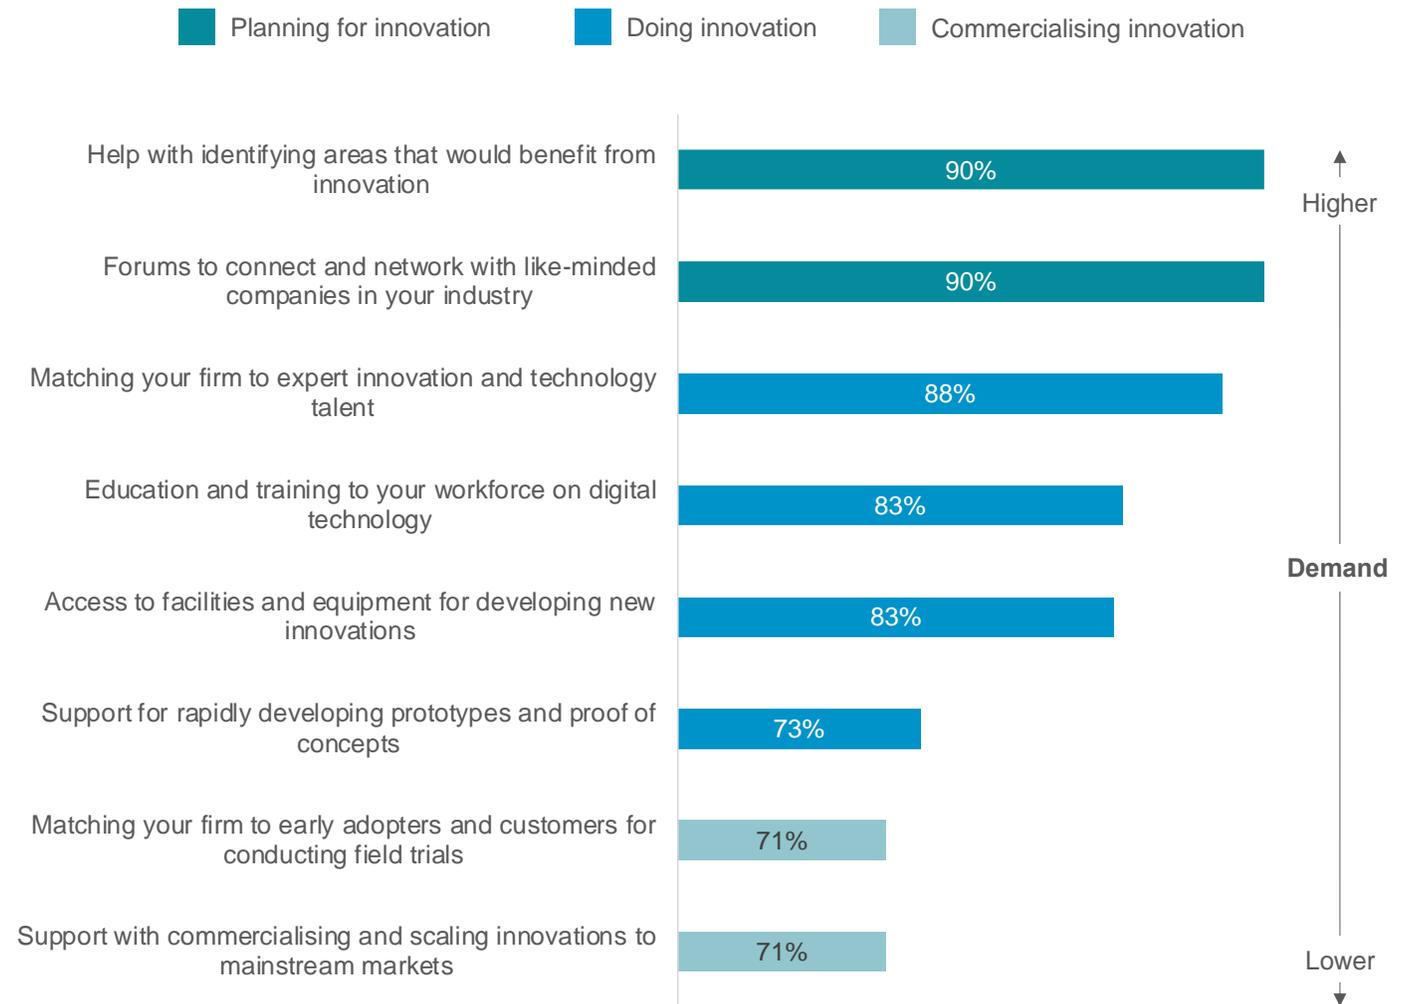

The gap between current usage and future potential is a 'stagnation zone' for firms. Their inability to build specific technology capability and skills will stall growth and impact on their local and global competitiveness.

# There is demand for digital innovation services

Firms' needs are often basic, particularly in the 'planning for innovation' stage. This includes advice on how digital can benefit their business and access to networks.

Others have more specific requirements including assistance with prototyping and commercialisation.

# Where we can look for inspiration

## Denmark

### Flagship initiative:

- Danish Outdoor Lighting Lab

### Why it works:

- Industry driven, but triple helix partnership
- Using the city as a Living Lab – not research behind closed doors
- Primary focus is on capability not buildings

**Results:** 550+ companies collaborating

## United Kingdom

### Flagship initiative:

- Tech Nation

### Why it works:

- Delivers dedicated startup growth programs
- Connects enterprises, policymakers and research institutions
- Nurtures the most promising technology talent

**Results:** 1000+ startups supported

## Canada

### Flagship initiative:

- MaRS Discovery District

### Why it works:

- Coalesces companies across the innovation ecosystem
- Assists companies to adopt emerging technologies
- Connects skilled talent with high-growth companies

**Results:** 200+ technology partners

## Western Australia

### Flagship initiative:

- Innovation Central Perth

### Why it works:

- Anchored by MNCs but targeting SMEs
- Brokerage service for students to work with industry
- Deep tech expertise offered to industry so they can build things not write reports

**Results:** 250+ industry projects
